Programming Applications with Databases

Exercise Set 0

1. Establish your DBMS environment. The recommended one is SQL Server, but any other is also allowed after receiving consent from the laboratory lecturer. Then install and configure your favorite SQL Client to connect to the DBMS. Finally, execute the below script and ensure that the whole setup is working properly:

```
CREATE TABLE Test(ID INT);
INSERT INTO Test(ID) VALUES(1);
SELECT ID FROM Test;
```
